

### UML Description-

The user and Twitter user are the same. Since the Twitter user id is distinct, it may also be regarded as the table's primary key.

Tweets can be sent by any number of users. The tweet will save details about the MBTA, Uber, and Lyft that were tweeted by users all around the world. It will also save details about the user, the tweet's language, and the time it was created.

By stating or including a URL, a user can tweet on Twitter about the MBTA, Uber, and Lyft. These information will be kept in tweet tags and tweet url.

Tweet text contains the "tweet," a foreign key that makes each tweet identifiable.
